

## ADHESIVE CARDBOARDS – EASY SHEETS

We have 3 different kinds of adhesive cardboard.

### Code AR804

It is removable.

It is used for all the pages/sheets/photos that have a smooth surface. Usually it is used for the inside of the block.

After placing the block under press for 20 minutes, the removable adhesive becomes permanent.

It is available in 280gr and 250gr compressed (around 200gr natural), white.

It is available in 250gr natural, black.

It is acid free. The advantages of acid-free are that in the future it does not damage the photo, the prints and the quality of the image.

It is good for special papers printed with the plotter.

It is adhesive in both the sides

It works with a cold system. Anyway it can be used also for the hot system. You have only to bypass the step of the oven. The remaining process is the same.

One pallet of adhesive cardboard contains 1000 sheets, packed in 20 reams of 50 sheets.

The sizes of the pallets are:

72x100 = 720 square meters

41x100 = 410 square meters

82x100 = 820 square meters

62x100 = 620 square meters

If you buy a whole pallet, we can also cut the reams on your request with an extra cost.

### Code AP904

It is permanent.

It is used for all the pages/sheets/photos that have a rough surface. (for exemple it is used to unite the face off with the first and last photo of the block).

It is also used to repair a photobook.

It is 280gr, white.

It is acid free. The advantages of acid-free are that in the future it does not damage the photo, the prints and the quality of the image.

It is good for special papers printed with the plotter.

It is adhesive in both the sides

It works with a cold system. Anyway it can be used also for the hot system. You have only to bypass the step of the oven. The remaining process is the same.

72x100 = 720 square meters

41x100 = 410 square meters

If you buy a whole pallet, we can also cut the reams on your request with an extra cost.

### Code AP902

It is permanent.

The glue of this cardboard is extra strong.

It is used to unite the block with the cover.

It is 62gr, white.

It is acid free. The advantages of acid-free are that in the future it does not damage the photo, the prints and the quality of the image

It is good for special papers printed with the plotter. .

It is adhesive in both the sides

It works with a cold system. Anyway it can be used also for the hot system. You have only to bypass the step of the oven. The remaining process is the same.
